

BEHAVIORDATA PSYCHODIAGNOSTIC

LABORATORY REPORT

Account: 005093

Subject: 55

Date: 02/17/09

Inventory: MMPI-2™

Report: 02

Options: RO,RE

Sex: Male

Age: 52

This is a report for counselors and caseworkers.

This report from Behaviordata Incorporated is based on the system that was designed by Joseph C. Finney, M.D., Ph.D., a psychiatrist and a clinical psychologist at the University of Kentucky, with the help of research grants from the National Institute of Mental Health and U.S. Vocational Rehabilitation Administration.

Analysis of this kind can be done from various psychological inventories or from other information. Like any other report based on an inventory, this is subject to error. No decision should be made from this report alone, but only from consideration of the case history and all the available evidence. In this case, the inventory completed and submitted for analysis was the Minnesota Multiphasic Personality Inventory-2(tm) (MMPI-2tm), the trademarks and copyrights of which are owned by the Regents of the University of Minnesota. The University and its licensee, NCS Pearson, Inc. (NCS), do not license, sponsor, or endorse Behaviordata's modified scoring and interpretive system or any reports resulting from it.

Behaviordata has purchased from NCS the MMPI-2(tm) Basic Service Profile Report, reformatted by permission on page 2 which provides standard MMPI-2(tm) test raw and T scores. The remainder of Behaviordata's report, including the Profile on page 3, contains re-analyzed and changed raw and T scores based on the University of Kentucky's Interpretive System developed by J. Finney (JF). Behaviordata's re-analyzed and changed scores are indicated by the addition of "-JF" to the scale name throughout the Behaviordata report.

The raw scores reported on this page were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for the rare (possibly random) answers.

The T-scores reported on this page are not the standard MMPI-2 T scores. These are the T-scores normalized by the University of Kentucky's Interpretive System, developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

The Mf score is based on scores by subjects of the same sex as this subject.

The following narrative statements are based on the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D. (JF) and distributed by Behaviordata, Inc.

He does not give a consistently favorable nor a consistently unfavorable picture of himself. He tells us some positive things and some negative things about himself.

He is a flexible and obliging person. He is a rather changeable, spontaneous person who can be unpredictable at times. He does what he happens to feel like at the time. He has some tendency to make enemies. He can become irritated, suspicious, and resentful at times. He is satisfied and contented. He claims to be in no distress at present. He denies any problems. He doesn't understand himself very well.

He can be a very capable and industrious person, efficient, and hard-working. He can be a good leader in every way. He can be warmhearted, friendly, and sociable. He seeks responsibility, and he goes out of his way to undertake it. He takes responsibility on, and he carries it out well. He appears to be active, enterprising, bright, and resourceful. He doesn't always do things in the conventional way. He gets good ideas spontaneously, ideas that can benefit the whole group. His thinking is well organized. He analyzes the issues, he grasps the key points, and he sees what needs to be done. He makes decisions quickly, he makes plans, and he stays with them, doing a thorough and systematic job. He speaks well, and he usually persuades people to go along with him. He tries to deal with people fairly and ethically. He can be trusted to use his authority not selfishly but for the benefit of everybody in the group. He looks after those over whom he has authority and takes good care of them.

At his best, he is cooperative, pleasant, and generous.

He can be so little aware of his own motives that he may seem naive. His recollection of the past may be idealized and romanticized. He blots out the memory of things that he would not like to remember. In viewing what goes on around him, he operates by forming a general impression. He doesn't study the details; he doesn't calculate or analyze the situation as a whole. He works in a more intuitive way. He can be impressed by things that are vivid.

At times he may seem theatrical or histrionic. He is likely to be influenced by other people who are dramatic or impressive, as well. When he has built up a romantic and idealized expectation of a situation, he may be disappointed to find it so commonplace.

He is susceptible to passing influences. He may be led into action without stopping to consider the consequences. At times he seems to manipulate people, but he does so with an air of innocence.

He can be a somewhat hostile person.

In general, he is a person who takes things out on himself. He takes things out on himself more than he takes things out on other people.

He appears to be a conscientious, responsible, and trustworthy person. He tries to be careful to deal fairly with people and to respect their rights. He is generally governed by fixed principles. He is no opportunist. He is reasonably sincere, cooperative, and self-denying. He usually abides by the rules, and he respects other people's rights.

Account 005093 Subject 55 [Male,52]

He takes initiative. He doesn't wait to be told what to do. He is capable of speaking out, when he is in the mood to do so. He can be perceptive. He observes people sharply. He is alert in gauging what people are thinking and feeling, and what they really want.

---- WORLD OF WORK ----

Let's consider how he fits into various kinds of work.

He has what it takes to make a great success in most kinds of work. He is so strong in the personal qualities that make for success at work that you may feel he doesn't need any vocational counseling. And yet some kinds of working situations fit him better than others.

His strongest point, the one that can help him the most to succeed in his work, is his ability to keep his emotions from interfering with the teamwork that is needed in a competitive work environment. In his work he is cool, confident, matter of fact, realistic, and practical. He is a tough competitor and a good team member. He may get tense about problems at work, but he doesn't get distracted by personal matters. He harnesses his energies and directs his efforts to the task at hand. He doesn't waste time in feeling sorry for himself, nor in casting blame, nor in picking quarrels that would interfere with the job. This can be a real strength. He can perform very well in a job that calls on him to control his personal feelings and focus his attention on the practical tasks of getting a job done by teamwork, in a competitive situation.

Another strong point that can help him in his work is his self-reliance in his work, and ability to use good judgment. He thinks independently, and he uses good judgment.

He can perform very well in a job in which he is called on to take responsibility for going ahead with the work and solving problems for himself, keep working constructively without being supervised, and use sound judgment when making decisions about the task at hand.

You will be wise to help him choose a type of work that calls on his strengths. In the right type of work, and in the right working conditions and setting, people will appreciate him for his best qualities.

He is the sort of person who keeps thinking in a bright and original manner. He has creative ideas. He can make a real contribution in a job that gives him a chance to put his ideas to work.

If he is considering a change in his career, you may wish to give him a vocational interest test such as the Strong Interest Inventory.

He is not looking for therapy or counseling at this time.

Account 005093 Subject 55 [Male,52]

The following analysis is based on the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D., (JF) and distributed by Behaviordata, Inc.

Account 005093 Subject 55 [Male,52]

The raw scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for rare (possibly random) answers.

The T-scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages are not the standard MMPI-2™ test T-Scores. These are the scores normalized by the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

All Rights are Reserved.

The simple T-scores given in the report are the true normalized scores developed by Joseph C. Finney, M.D., Ph.D., at the University of Kentucky. This is the only standardization of the MMPI that was sponsored by a research grant from the National Institute of Mental Health.

AT, FAT, and TFAT scores are computed to reduce effects of response sets correlated with the A factor and the F scale.
