

BEHAVIORDATA PSYCHODIAGNOSTIC

LABORATORY REPORT

Account: 005093

Subject: 55

Date: 02/17/09

Inventory: MMPI-2™

Report: 05

Options: RO,RE

Sex: Male

Age: 52

This is a report for physicians and surgeons. It is sent only to fully qualified and licensed physicians or to professionals who are licensed for the independent practice of psychodiagnosis and psychotherapy.

This report from Behaviordata Incorporated is based on the system that was designed by Joseph C. Finney, M.D., Ph.D., a psychiatrist and a clinical psychologist at the University of Kentucky, with the help of research grants from the National Institute of Mental Health and U.S. Vocational Rehabilitation Administration.

Analysis of this kind can be done from various psychological inventories or from other information. Like any other report based on an inventory, this is subject to error. No decision should be made from this report alone, but only from consideration of the case history and all the available evidence. In this case, the inventory completed and submitted for analysis was the Minnesota Multiphasic Personality Inventory-2(tm) (MMPI-2tm), the trademarks and copyrights of which are owned by the Regents of the University of Minnesota. The University and its licensee, NCS Pearson, Inc. (NCS), do not license, sponsor, or endorse Behaviordata's modified scoring and interpretive system or any reports resulting from it.

Behaviordata has purchased from NCS the MMPI-2(tm) Basic Service Profile Report, reformatted by permission on page 2 which provides standard MMPI-2(tm) test raw and T scores. The remainder of Behaviordata's report, including the Profile on page 3, contains re-analyzed and changed raw and T scores based on the University of Kentucky's Interpretive System developed by J. Finney (JF). Behaviordata's re-analyzed and changed scores are indicated by the addition of "-JF" to the scale name throughout the Behaviordata report.

MMPI-2 BASIC SCALES PROFILE Re-analyzed and Changed by the
 University of Kentucky's Interpretive System Developed by J. Finney

The raw scores reported on this page were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for the rare (possibly random) answers.

The T-scores reported on this page are not the standard MMPI-2 T scores. These are the T-scores normalized by the University of Kentucky's Interpretive System, developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

The Mf score is based on scores by subjects of the same sex as this subject.

The following narrative statements are based on the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D. (JF) and distributed by Behaviordata, Inc.

He does not give a consistently favorable nor a consistently unfavorable picture of himself. He tells us some positive things and some negative things about himself.

He is a flexible and obliging person. He is a rather changeable, spontaneous person who can be unpredictable at times. He does what he happens to feel like at the time. He has some tendency to make enemies. He can become irritated, suspicious, and resentful at times. He is satisfied and contented. He claims to be in no distress at present. He denies any problems. He doesn't understand himself very well.

He can be a very capable and industrious person, efficient, and hard-working. He can be a good leader in every way. He can be warmhearted, friendly, and sociable. He seeks responsibility, and he goes out of his way to undertake it. He takes responsibility on, and he carries it out well. He appears to be active, enterprising, bright, and resourceful. He doesn't always do things in the conventional way. He gets good ideas spontaneously, ideas that can benefit the whole group. His thinking is well organized. He analyzes the issues, he grasps the key points, and he sees what needs to be done. He makes decisions quickly, he makes plans, and he stays with them, doing a thorough and systematic job. He speaks well, and he usually persuades people to go along with him. He tries to deal with people fairly and ethically. He can be trusted to use his authority not selfishly but for the benefit of everybody in the group. He looks after those over whom he has authority and takes good care of them.

At his best, he is cooperative, pleasant, and generous.

He is not at all the sort of person who has bodily symptoms to symbolize his emotional conflicts without an organic basis.

He is not at all mentally ill; that is, not at all psychotic. He shows no tendency toward psychosis at all.

To some extent he has some of the personality characteristics of ulcer patients.

He can be a somewhat hostile person.

He appears to be a conscientious, responsible, and trustworthy person. He tries to be careful to deal fairly with people and to respect their rights.

---- DIAGNOSTIC IMPRESSION ----

Assigning a diagnosis should never be attempted on the basis of psychological test results alone, nor from automated narrative reports generated from such findings. Rather, diagnostic conclusions should derive from a variety of informational sources, including detailed history, direct observation, clinical interview, the review of available clinical records, and test results. Diagnosis should also take into account factors such as any medical condition or injury, disability, trauma, or situational stresses that might affect this person's test performance.

Insofar as we can judge from our analysis of the psychological testing alone, the diagnosis most likely to fit this person best is:

Account 005093 Subject 55 [Male,52]

Dependent personality disorder, with histrionic, dysthymic, and extroversive behavior, in a dramatically depressed mood, coded on Axis II. Histrionic " suicide attempts "Are common, but death is rare.

Other diagnoses which may be worth considering are as follows; they are ordered according to the likelihood of application to this subject, regardless of whether they fall on Axis I or Axis II:

Histrionic personality disorder, with compulsive features. Coded on Axis II. These people use a mixture of relatively normal defense mechanisms. There is some possibility of hysterical acting-out.

No psychiatric diagnosis. This individual falls within normal limits.

The following analysis is based on the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D., (JF) and distributed by Behaviordata, Inc.

165 AHm	48	52.9	54.8	54.8	53.9	Alcoholism (Holmes)
166 Ant	26	55.3	56.9	57.0	56.1	Antisocial

Account 005093 Subject 55 [Male,52]

The raw scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages were obtained by changing the standard MMPI-2™ test raw scores by reducing the factor of anxiety or social desirability and the effects of response set for rare (possibly random) answers.

The T-scores for scales L-jf, F-jf, K-jf, Hs-jf, HsK-jf, D-jf, Hy-jf, Pd-jf, PdK-jf, Mfm-jf or Mff-jf, Pa-jf, Pt-jf, PtK-jf, Sc-jf, ScK-jf, Ma-jf, MaK-jf, and Si-jf reported on these Scale Information pages are not the standard MMPI-2™ test T-Scores. These are the scores normalized by the University of Kentucky's Interpretive System developed by J. Finney, M.D., Ph.D., on a sample of 2000 men and women.

All Rights are Reserved.

The simple T-scores given in the report are the true normalized scores developed by Joseph C. Finney, M.D., Ph.D., at the University of Kentucky. This is the only standardization of the MMPI that was sponsored by a research grant from the National Institute of Mental Health.

AT, FAT, and TFAT scores are computed to reduce effects of response sets correlated with the A factor and the F scale.
